We, Transaxle shop, PVBU, TML Pune, have been using Pro-QMS software for maintaining SPC for Critical/Major /special characteristics in our manufacturing Process.

Initially we started using in Transaxle Hard shop (Grinding) and subsequently DSS came forward for Assembly line, Housing shop to suit our requirements.

It provides real time monitoring of X bar & chart, process monitoring chart, Histogram and Cpk dashboard.

We are happy with the response and promptness of the Pune Team in training of our team and attending to service requirements.

Further looking forward in extending the same other applicable areas.
