### TESTIMONIAL

We have been using Pro-QMS - Online SPC system implemented by DSS Systems & Software Technologies Limited, Pune, since 2012 in our machine shop for in-process quality control. We have been successfully collecting real time data in all machining lines directly from air gauges, plot control charts online and view histogram and process capabilities instantaneously.

We are pleased by the technical support and training given by DSS to implement and effectively utilize the system. Local support available from DSS at Chennai is timely and very satisfactory.

We wish to upgrade it further and implement centralized plant level monitoring of all parameters by integrating Pro-QMS data collection and monitoring stations presently in all machining lines.

Yours truly,

**For Transenergy Limited**
